

INTEGRATION TEST DOCUMENT		Application/System Name	NGITIFY: A DENTAL INFORMATION MANAGEMENT SYSTEM WITH AI- DRIVEN PATIENT ENGAGEMENT FOR DENTIME DENTAL CLINIC		
Test Cycle No.	1	User/Access Type	Owner		
Date Tested	08/25/2026	Type of System	Web Application		
Pre-conditions	Open a supported browser; use prepared accounts and test data for the stated role and branch scope				
Verification Steps	Enter the correct URL, execute every listed action, and record Actual Results and Remarks				
Modules	Action Description		Expected Results	Actual Results	Remarks
Appointment Status Modal	Select Confirm, In Clinic, Complete, or another allowed next status and click Cancel.		The confirmation closes and the appointment retains its previous status.		
Appointment Status Modal	Select an allowed next status and click Confirm or Update Status.		The status changes once, the schedule refreshes, and the patient- facing appointment and related notification reflect the change.		
Cancel Appointment Modal	Click Cancel Appointment, enter or select a reason, then close or click Cancel.		The modal closes and the appointment remains active with its previous status.		
Cancel Appointment Modal	Click Cancel Appointment, provide required information, and confirm cancellation.		The appointment becomes cancelled, the slot is released when applicable, and the patient sees the cancellation and notification.		

Guest Appointment	Open an eligible guest request and click Confirm Guest Request.	The request becomes a confirmed appointment without creating duplicate schedule entries.		
Guest Appointment	Click Register or Link Patient and choose an existing match or create a valid patient.	The appointment links to exactly one patient record and retains its original request details.		
Guest Appointment	Click Resend Link for an eligible guest request.	The activation or registration link is reissued once and a success or recoverable delivery message displays.		
Schedule Pagination	Click Previous or Next in a multi-page schedule.	The requested page displays with no duplicate rows, and the controls disable at the boundaries.		
Owner Dashboard	Open Dashboard and review organization summary cards, recent activity, alerts, and calendar.	Authorized organization-wide totals and records display with clear loading, empty, and error states.		
Owner Dashboard	Click Manage Staff, Manage Schedule, Patient Records, or another visible shortcut.	The matching page opens with organization-level scope permitted to the owner.		

Owner Dashboard	Use previous, next, or date controls on the calendar and close an alert.	The calendar displays the selected period and the alert closes without changing operational records.		
Staff Management	Open the role's staff list and review visible staff cards or rows.	Only staff within the signed-in user's role and branch scope display with accurate role, branch, activation, and lifecycle status.		
Staff Management	Search staff and apply Active, Needs Activation, Inactive, Archived, or All filters.	The list displays only matching in-scope accounts and an appropriate empty state when no record matches.		
Add Staff	Click Add, submit missing, malformed, or duplicate staff information.	Required, format, and duplicate validation display and no staff account is created.		
Add Staff Modal	Enter staff information and click Cancel or close.	The modal closes and no new staff account appears.		
Add Staff Modal	Submit valid staff identity, contact, role, and branch information.	One staff account is created with the selected assignments and a success or activation-delivery result displays.		

View Staff	Click View on a staff record and then Close or Back.	The selected staff details display without sensitive credentials; Close or Back returns to the same list state.		
Edit Staff	Change valid editable staff information and click Save or Done.	The existing staff account updates once and the new information persists in the list and detail view.		
Edit Staff	Enter invalid data or click Cancel.	Invalid values are not saved; Cancel closes the form and preserves the original staff record.		
Staff Lifecycle Modal	Choose Activate, Deactivate, Archive, or Restore and review Impact Preview, then click Cancel.	The modal closes and the staff status and access remain unchanged.		
Staff Lifecycle Modal	Provide the required reason and click Confirm.	The allowed lifecycle action completes once, list status updates, account access follows the new state, and the action is logged.		
Staff Management	Attempt an action on a staff account outside the signed-in user's scope.	The control is unavailable or the server rejects the request without exposing or changing the out-of-scope account.		

Patients Management	Open Patients Management and review the patient list.	Only patients authorized for the role and branch display with accurate identity, branch, contact, and lifecycle information.		
Patients Management	Search patients and apply status or branch filters, then clear them.	Only matching authorized patients display; clearing filters restores the allowed list.		
Patients Management	Click Export CSV and Export PDF.	Each download contains the currently authorized patient list and excludes out-of-scope records.
